

1. couple magnetic beads (-) to antigen-positive cells (⊗)
2. add excess antigen-negative cells (○)
3. add phage library containing specific  and non-specific  binders
4. incubate
5. load on column without magnetic field
6. place column in magnetic field and wash away antigen-negative cells and non-specific phage
7. flush antigen-positive cells and bound phage from column, elute bound phage, infect bacterial culture
